

Release Notes

Product MediaWall 2000

VERSION: 1.04
PART # / CSUM: 369-8692
COMPATIBILITY: Requires hardware version 1.20 or later
NEW FEATURES:

CHANGES/FIXES:

The following changes/fixes are included in this release.

Compact Flash card capacity increased to supports cards up to 1 GB.

Previously when using a test pattern, the background used prior to execution of the Test pattern command would be lost.

At some sizes, PAL video windows previously sometimes showed corrupted video at window edges.

At some sizes, PAL video windows previously sometimes displayed a pink line at the lower edge of a window.

The seconds digits of the clock display are now updated periodically at the one second rate.

Corrected a WCP issue that prevented configuration of 1x4 walls.

Front panel spelling of Celsius has been corrected.

Temperature alarm threshold has been adjusted to a board temperature of 70 degrees to eliminate false alarms.

Corrected an issue with SETTINGSIMPORT command that caused analog output calibration values to be changed.
