CHANGES: **The following changes are included in this release.**
Front panel reset switch now sets administrator and user passwords to the default values
Restore Factory Defaults command now includes reset of administrator and user passwords to their default values
Improved range of video sharpness
White in color pallet now set to peak white (100%)

BUG FIXES: **The following bug fixes are included in this release.**
Some input timings caused window to blank
Attempting to load from compact flash card that was not present caused system lockup
Window borders were not restored from RECALLCONFIGURATION command
Sharpness command was applied to wrong window in some circumstances
Running in autosync DEBUG mode continuously eventually caused lock difficulties
Windows tearing on vertically split windows
Incorrectly allowed adjustment of vertical mullions on linear walls
SETTINGS IMPORT and RECALLCONFIG commands did not set system baud rate correctly.
FULLSCREEN command caused video windows to disappear even when highest priority
Certain settings of sharpness cause video windows to go dark.
Intermittently the top half of vertically split windows would not show.
