

Release Notes

Product MediaWall 2000, SuperView 4000 6/6

VERSION: 1.0.8

COMPATIBILITY: No Known Compatibility Issues

NEW FEATURES: Integrated Control System with KvM Option

CHANGES: **The following changes are included in this release.**
Monochrome video inputs are properly displayed.

BUG FIXES: **The following bug fixes are included in this release.**
N/A

KNOWN BUGS: **The following discrepancies are known in this release**

1. Background images must be saved with the extension .tiff, .jpg, or .jpeg.
2. The sharpness range on the WCP does not match the actual sharpness range. All sharpness values are accessible from the WCP, but there are some invalid values listed
3. During loading of a background image the list may disappear or the following message may appear "Can not establish communication with the unit. make sure the network cable is connected and restart the WCP." If the message appears, ignore the message and press OK. If the background list disappears, press the refresh button to restore the list.
4. There is no support for the Windows VISTA operating system.
5. Windows displayed in the WCP virtual screen do not get re-scaled when the WCP virtual aspect ratio changed.
6. The WCP virtual screen aspect ratio radio button is not present for SuperView 4000 6/6.
7. Sometimes cannot access RDA system if the layout had been changed while the mouse pad was open. 4800x1200 background files are not found after performing a power cycle. (KvM)
