

MediaWall[®] 2000

July 8, 2005

Formatting a Compact Flash for Background and Foreground storage

MediaWall 2000 requires that a special formatting be done and specific directories be created in order to comply with the WCP.

1) Formatting:

Using the windows format option does not use the correct defaults for MediaWall 2000.

The following DOS command line will correctly format a compact flash for use in the MediaWall 2000:

```
format [CF_Drive_Letter]:/fs:fat/a:2048
```

2) Creating the directories:

Two directories must be created in the Compact Flash card and named as follows:

bg

fg

The "bg" directory is where you will store the backgrounds.

The "fg" directory is where you will store the foregrounds.

RGB Spectrum

Corporate Headquarters, USA

950 Marina Village Parkway
Alameda, CA 94501

Phone: 510-814-7000

Fax: 510-814-7026
