MediaWall

Video Wall Display Processor

4K Ready When You Are
High Performance Video Processing

The MediaWall V processor can display any configuration of window layouts across a multi-screen array. Windows can be sized as required anywhere, within or across screen boundaries, in any aspect ratio and zoomed in to emphasize details. Signal switching and preset layout recall are fast and seamless.

A purpose-built architecture dedicates processing resources for each input. Each is displayed in real-time at full color, frame and pixel rates, without common video wall artifacts such as dropped frames or image tearing. The result is superb performance and an enhanced visual experience.

The MediaWall V’s application processor supports the decoding of multiple IP camera and other H.264 streams and the running of Windows applications. A hybrid architecture, with two separate processing subsystems, isolates video wall processing functions from application processing, allowing the wall display to operate continuously even in the event that the second processor is compromised by problems like malware or software failure.

HDCP capability allows protected content, such as the output of a Blu-ray player, to be displayed on the video wall.
**MediaWall Topology**

The MediaWall V processor accepts direct video feeds from computers, cameras and other sources via HDMI single-wire interfaces or as IP streams over Ethernet, at up to 4K resolution. It outputs processed video to the video wall, also over HDMI single-wire interfaces, at up to 4K resolution. Auxiliary video output ports support switched video to additional displays and audio processors. Control is via Ethernet.

**Control Options**

The MediaWall V processor offers a range of control options. The web-based set-up GUI supports both local and remote access, "drag and drop" window positioning and scaling, wall layout presets, and input selection. In addition, the newly introduced VIEW™ Controller adds a graphically-enhanced user interface with live thumbnails, providing operators with a very intuitive user interface. The processor can also be controlled by a variety of third-party devices.

For the most demanding applications, the MediaWall V processor is compatible with RGB Spectrum’s MultiPoint® Control Room Management System (Enterprise MCMS™) — an innovative hardware and software platform that provides operators with arbitrated keyboard and mouse (KVM) control over system resources.

Enterprise MCMS is ideal for use in mission-critical control room applications such as command centers, debriefing centers, security operations centers (SOCs), emergency operations centers (EOCs), industrial/process control and SCADA system monitoring. The system’s unique design isolates critical systems from the network, effectively protecting sensitive data from external tampering, malware and viruses.
Powerful Capabilities

In the Control Room
And Beyond

The MediaWall V processor has the ability to power a video wall plus auxiliary monitors or even multiple video walls, making it suitable for the most sophisticated audio-visual environments.

When used with projectors, the processor provides adjustable overlaps for edge-blending to enable immersive, seamless UHD displays that span entire rooms - ideal for museums, theatres, auditoriums and a range of other venues.

There has never been so capable a video wall processor. With 4K/UHD resolutions fully supported, the MediaWall V processor is ideal for graphically rich applications like simulation & training, modeling, and high-resolution video surveillance.

Additional Features

• Mullion / bezel compensation
• Up to 60 wall layout presets
• HDCP copy protection compliant
• Up to 6 displayed clocks
• Foreground graphics
• Image overlap for edge blending
• Auxiliary switched outputs
• Borders and labels

Options

• Application processor for IP stream decodes and Windows® applications
• Up to 3 wall arrays
• Redundant hot swappable power supply
• VIEW® Controller

COLLABORATE

with your team

• Connect multiple users
• Display visuals and data
• Control with a computer

VISUALIZE

your data

• Decode IP streams
• Run applications directly on the video wall
• Display visuals, any size, anywhere

CONTROL

your world

• Utilize encrypted IP video + KVM control
• Arbitrate use of system resources
• Work with remote operations
