

VIEW Controller

For MediaWall V Display Processor

VIEW™ Controller is a software control solution for RGB Spectrum's MediaWall® V video wall systems. An intuitive graphical user interface (GUI) provides live thumbnails and allows users to “drag and drop” sources to destinations for display.

Advantages

- Integrated control of video wall processor
- Simple, “drag and drop” source routing
- Live thumbnails of all sources
- Sources organized by groups and categories
- Switched outputs organized into display groups
- Sources easily scalable across video wall displays
- Preset window layouts and routings

No Programming Required

VIEW Controllers can take the place of complicated third-party controllers. The VIEW Controller doesn't require custom programming, making it both quick to implement and cost-effective.

User Profiles

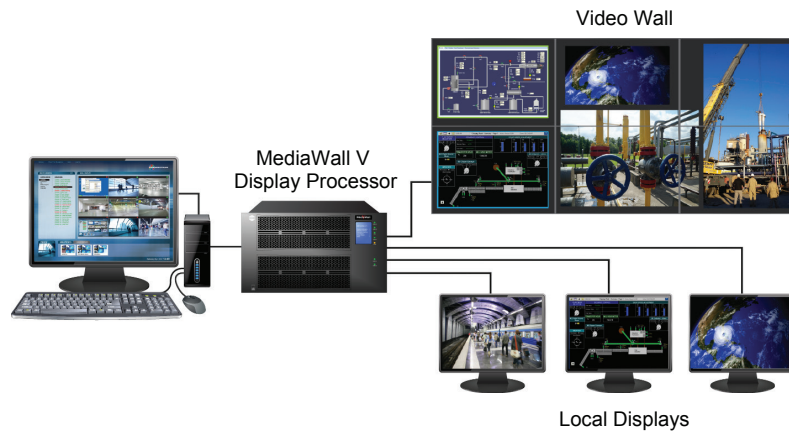

To ensure security, administrators can set up access control based on user privileges and profiles that allow or restrict access. This enables a single VIEW control station to support multiple users with configurable levels of access.

Simple Set-up and Operation

The enhanced visual display and streamlined design of VIEW Controllers simplify operation and help minimize the training time required for operators to understand how to use the system. Up to three operator control stations are supported.

View the Difference

Combining interactive features with an intuitive interface, the VIEW Controller offers an affordable yet highly integrated information management solution for RGB Spectrum's MediaWall V video wall processor.
